

A SMALL READING HANDBOOK

01 Begin with a question

This original sample is included to demonstrate the PDF reader. It is not a published book or research paper. Replace it with your own public learning materials when you are ready.

Reading begins with curiosity. Before opening a document, write down a question you would like to answer. A clear question helps you choose what deserves your attention.

Work through one section at a time. Identify the main claim, the supporting evidence, and the conditions under which the claim holds. Keep these parts separate in your notes.

Understanding is more than remembering a sentence. Try explaining an idea without looking at the page. Use a concrete example, then check whether your explanation matches the source.

Good notes create connections. Link a new concept to something you already understand, and record the uncertainty that remains. Questions are useful results of reading too.

This page is selectable text. Use the toolbar to change the page or zoom. Close the reader and open it again to check that your reading position is restored in this browser.
